

Clinical Examination Station 4

9 minutes with up to 1 minute for feedback

You are a surgical SHO in plastic surgery outpatients. The next patient is a 69 year old man who is well known to the department. You are asked to examine her face as you feel appropriate, present your findings and discuss the underlying pathology

Head and neck examination

Candidate performs an appropriate examination of the face and including appropriate cranial nerves and presents their findings in a comprehensive and succinct fashion.

Questions as appropriate, for example:

Discuss principles of management of skin tumours

Has an appreciation of the anatomy of the facial nerve.

Discusses presence of facial nerve palsy and possible causes.

Is able to undertake an appropriate discussion of the principles of reconstructive surgery for facial nerve palsy.

Overall impression of the candidate Please encircle your mark
